

IMPOWER your patient registration desk with **POWERstation™**

POWERstation is a front-end patient registration workstation for your Practice Management (PM) and Electronic Medical Record (EMR) systems. Using a document scanner, signature pad, magnetic card reader, digital camera and Optical Character Recognition, POWERstation transforms patient registration into an entirely digitized process, virtually eliminating paperwork while instantly making new patient records available to applications throughout your network.

Easy to use and powerful

Install POWERstation's software and hardware add-ons to the registrar's existing PC. Scan and digitally convert a patient's handwritten registration forms, photo ID and insurance cards directly into the system. Photograph a patient, if needed, for your records. When a signature is required, POWERstation alerts you, displays the form for patient review and captures his or her signature through the signature pad. POWERstation seals the signature with the form and securely saves it as a legally binding, HIPAA-compliant, electronic document.

Increase productivity

POWERstation speeds form-handling and reduces data entry errors by pre-populating fields from information previously captured on other forms. Instantly share data with your PM and EMR applications through standards-based HL7 and ODBC connectivity. Quickly locate patient records in virtual folders and cabinets while eliminating the hassle of lost forms or documents.

Collect payment sooner

Verify patient insurance eligibility, co-pay and deductibles before providing service. Collect credit card or check payments and submit for real-time processing.

Key Features

- *Seamlessly integrates with any PM or EMR system as a front-end patient registration station.*
- *Scans patient admission forms, IDs and insurance cards into digital format.*
- *Uses handwriting recognition to convert completed forms to text to allow use with PM and EMR systems.*
- *Automatically populates fields in new patient forms and notifies registrar when signatures are required.*
- *Captures patient signatures using electronic signature pad to legally bind with digital consent forms.*
- *Verifies insurance eligibility, co-pays, and deductibles, in real-time, via the Internet.*
- *Processes credit card and check payments prior to rendering service.*
- *Digitally captures patient photographs.*
- *Intuitive user interface mimics familiar registrar workflow with virtual folders and cabinets.*
